

Subject Vision and Intent: Geography

Our Vision

At King's Cross Academy, we believe that Geography helps children understand the world around them and their place within it. Our ambition is for children to leave KCA with a rich knowledge of places, people and environments, an understanding of the connections between them and a curiosity about a world that extends far beyond their immediate experience.

Our diverse community provides a powerful starting point for geographical learning. Children bring experiences, languages and connections from across the world, and we want our curriculum to celebrate these while extending every child's knowledge of places that may be unfamiliar to them. Through Geography, children learn to appreciate both the extraordinary diversity of our planet and the ways in which people, places and environments are interconnected.

Our Geography curriculum reflects our Academy vision, *Love Learning Together*, by encouraging children to explore, question and investigate the world. It supports our KCA values by developing curiosity about different communities, respect for people and places, and a growing understanding of our shared responsibility for the world we inhabit.

Our Intent

Our Geography curriculum is ambitious, inclusive and carefully sequenced. It identifies the essential knowledge, vocabulary, concepts and geographical skills we want children to develop from the Early Years to Year 6, enabling them to build increasingly rich and connected knowledge of the world.

Children develop secure knowledge of location and place alongside an understanding of the physical and human processes that shape our world. They encounter places at different scales, from King's Cross and London to the United Kingdom and the wider world, learning to identify similarities, differences, patterns and connections between them.

Important geographical concepts are deliberately revisited and developed over time. Children deepen their understanding of place, space, scale, environment, interconnection and change, allowing new geographical knowledge to connect with what they have learned before.

Alongside this knowledge, children learn to think and work as geographers. They ask geographical questions, interpret maps and other geographical information, collect and analyse data, identify patterns and communicate what they discover. Map work and spatial understanding are developed progressively so that children become increasingly confident in locating, describing and making connections between places.

Fieldwork is an important part of our Geography curriculum. Our location in the heart of King's Cross provides a rich geographical environment in which children can observe, investigate and understand their surroundings. Through fieldwork and experiences beyond the classroom, children collect information, make observations, test ideas and apply their classroom learning to the real world.

Children also explore some of the significant geographical challenges facing our world. Through carefully chosen examples, they develop an age-appropriate understanding of environmental change, sustainability and the relationship between human activity and the natural world. We want children to consider these issues from an informed geographical perspective, recognising their complexity and the different ways in which people and places can be affected.

Vocabulary is explicitly taught and revisited so that children develop the language needed to describe places, explain processes, identify relationships and communicate geographical ideas with increasing precision.

Every Child

We have high expectations for every child. Children with SEND, children who are disadvantaged and children who are developing English as an additional language access the same ambitious Geography curriculum.

Teachers identify the essential knowledge, vocabulary and geographical concepts that all children need to understand and adapt teaching so that barriers are reduced without lowering expectations. Maps, photographs, diagrams, models, first-hand experiences, explicit vocabulary teaching, structured discussion and opportunities to revisit important knowledge help children develop secure geographical understanding.

We recognise that access to experiences beyond a child's immediate environment can differ significantly. Our curriculum therefore deliberately broadens children's horizons through fieldwork, visits, carefully selected resources and encounters with a wide range of places and communities.

By the end of Year 6, our aim is for children not simply to know more places and geographical facts, but to understand the relationships between them. We want them to interpret geographical information, investigate the world around them and explain how people, places and environments influence one another. Above all, we want children to leave KCA as curious, knowledgeable and thoughtful geographers, equipped to continue making sense of an interconnected and changing world.
